

## Study Tips!

- ★ Have a quiet space, with a clean desk and all the materials you need to practice (ie. paper, pencil, eraser, sharpener, notes, calculator, etc.)
- ★ Look at your study schedule and confirm which skill you will be practicing. Decide how you would like to practice that skill (see below)
- ★ Set a timer for 15 - 20 minutes so you know you have spent at least this amount of time reviewing. You should be setting aside this amount of time EACH DAY before your test to review, even if you think you know it well!
- ★ As you are reviewing, if you are struggling with anything, write it down in a safe spot so that you can ask your teacher about it the next day (or send a respectful email outlining exactly what you'd like help with!)
- ★ When you are finished practicing, check it off on your study schedule (you can choose not to check it off yet if you feel you need more practice)

## Ways to study:

- Make flashcards of keywords to make sure you know what they mean.
- Complete practice worksheets provided by your teacher.
- Find other worksheets online if you feel you want more, or ask your teacher to provide you with more.
- Use online websites suggested by your teacher for practice.
- Create tutorials of yourself completing or explaining a concept. Teaching others is the best way to demonstrate our own understanding.
- Look up videos of other people explaining the same concept. Sometimes hearing it in a new way can help.
